PROFILE

I'm Stas: a full-stack developer and project manager from Enschede, the Netherlands, originally from Ukraine. For over five years I led Magento projects and dropshipping integrations at Magdeveloper and Webshopimporter, from the first client meeting to go-live and support. After that I built web applications in Laravel, Filament and Vue at Coddin, along with webshops and migrations to Shopify.

I translate what a client wants into what a developer builds, and dive into the code myself when that is faster. Eager to learn, social and patient, but focused when it counts. Scripting has been my passion for years.
